

## **FOOD ORDER APPLICATION-MEAL MAGIC**

### **Project Sponsors:**

- 1)Anudeep Amara(G02495899).
- 2)Gantyaada Sundeep(G02494036).
- 3) Ramya Navuluri(G02494845).

### **Business Need:**

Connecting customers with the food is the main purpose of this project. Our website helps to order the food of individual choice that are present in the menu that is provided by the user. It shows us the price of the food with their choice of cuisine.

### **Business Requirements:**

- \*Online restaurant management system.
- \*Responsive webpages.
- \* This will speed up the ordering process.
- \*This will avoid long queues at the counter due to the speed of execution and number of optimum screens to accommodate the maximum throughout.

### **Business Value:**

- \* This is one of the major usages of an online food ordering system, where you will get the chance to explore the food from different places. Therefore, you will get the option to order the food from multiple restaurants.

Revenue in the Online Food-Delivery segmented total of usd. \$500000

\*25000\$ goes for the Application Development (50 percent of \$500000)

\*15000\$ goes for the Restaurant Collaboration Management (30 percent of \$500000)

\*8000\$ goes for the Labour Cost Service (15 percent of \$500000)

\*2000\$ goes for the enhancement and maintenance of the servers. (5 percent of \$500000)

### **Special issues or Constraints:**

- \*Online ordering means more choices. Now customers can order a smorgasbord of delicious culinary options from their favourite local eateries, even healthy options.
- \* When you're busy during the dinner rush, it's easy for small order details to slip through the cracks. Your staff doesn't have a lot of time to spend on phone calls, often resulting in rushed conversations and missed information. One of the benefits of online ordering for restaurants is that

customers manage their own orders, which gives them the ability to order exactly what they want — and that includes giving special instructions.

\*If you want to stay relevant in the industry, then you need to keep up with the trends. What does it say about your restaurant when you don't have a website and your competitors are offering online food ordering? You need to stay competitive, which means that you need to be up to date with an online presence and the option for digital orders.
